

FOR IMMEDIATE RELEASE**11 NOVEMBER 2010****MAJOR SERVER UPGRADE SUCCESSFULLY IMPLEMENTED.**

As a result of the significant increase in the number of sites we have developed and the consequent increase in the number of users we decided to implement a major upgrade of our hosting environment. This has been implemented over the past month and we hope that all our users have noted real improvements in the speed of accessing all of our sites.

This has been achieved without compromising on any of the measures we have in place to ensure that everyone's data is kept secure and that any data that is saved to our servers remains there for immediate and future use.

Our hosting environment will continue to be provided by one of the world leading providers of hosting, Rackspace and we will keep subscribing to their highest level of service they provide thereby offering to our customer the maximum assurance that their data will be safe and available. As a result of the changes our server capacity has increased tenfold.

Richard Etheridge our Director of Technical Services comments that,

'This is a major piece of work for the company and we have managed to implement it with minimal disruption to our customers indeed we have been pleased to receive feedback from our customers about the improvements in speed. We are proud of the fact that most months we can report that all our sites are available all of the time and being successfully accessed from all over the world. These changes will ensure that even though we have a greater number of users this will continue to be the case.'
